ABSTRACT: In the present study, we provide a checklist of the vascular plants of Kinnaur district situated in the Himachal Pradesh state of India in the western Himalaya. This checklist includes 893 taxa (*viz.*, species, subspecies and varieties) belonging to 881 species of angiosperms and gymnosperms distributed among 102 families and 433 genera, and 30 species of pteridophytes. Information about the growth habit, threat and endemism status is also provided. Our results show that family Compositae is by far the most species rich family with 122 species, followed by Poaceae (69), Rosaceae (58), Leguminosae (49) and Lamiaceae (38). Among the genera, *Artemisia* is the most diverse genus with 19 species, followed by *Potentilla* (14), *Saussurea* (13), *Polygonum* (11), *Astragalus* (10), *Lonicera* (10) and *Nepeta* (10). Similar to other regions in the western Himalayan range, family-to-genera ratio was 1:4.25 and the genera-to-species ratio was 1:2.04. Out of 893 taxa, our checklist includes 606 herb species, 63 trees, 108 shrubs, 28 climbers, 67 graminoids and 21 sedges and rushes. Of all the species recorded, 108 (12.2%) are endemic to western Himalaya and 27 (3%) are placed under IUCN threatened categories. The present checklist on the flora of Kinnaur provides an important baseline data for further quantitative studies on the characteristics of plant communities in this region and will help in the identification of priority conservation areas.

INTRODUCTION

Western Himalaya has long been recognized as a distinct floristic region in India (Hooker 1904; Mani 1974; Singh and Singh 1987). The mountain ranges situated on the western side of river Sharda (or west of 77° E longitude) in northwestern India, constitutes the 'Indian Western Himalaya' which includes the states of Jammu and Kashmir, Himachal Pradesh and Uttarakhand. This region harbours a rich regional flora due to its diverse topography, wide altitudinal range and location at the intersection of several biogeographical units. The flora of western Himalaya exhibits affinities with that of Mediterranean, Siberian, Tibetan and Indo-Malayan regions. In contrast, the vegetation of eastern Himalaya displays affinities with Chinese and Malayasian elements, and supports luxuriant evergreen broadleaf forests or 'tropical rainforests' at lower elevations. Another notable difference between the western and eastern Himalaya is that conifers are less common and are generally mixed with broadleaved species in the eastern Himalaya as compared to the western Himalaya. In the eastern Himalaya, number of vascular plant species, the number of epiphytes (mostly Orchidaceae), *Rhododendron* and *Quercus* species are also several folds greater than that in western Himalaya (Singh and Singh 1987). The Himalayan Mountain Range forms a distinct biogeographic ecoregion with large variation in topography, climate and harbours considerable plant diversity (Olson *et al.* 2001). The proportion of endemic taxa is substantial in the entire Himalayan Range and thus, this ecoregion has been designated as a global biodiversity hotspot (Myers *et al.* 2000). Around 4000 species of higher plants and about 29% of the endemic taxa of Indian dicotyledonous flora occur in the Himalaya (Singh

and Singh 1987). In the western Himalayan region, the prominent angiosperm families are Asteraceae, Rosaceae, Poaceae, Ranunculaceae and Brassicaceae (Rau 1975). The vegetation is represented by lower and upper western Himalayan temperate forests, dry temperate coniferous forests, sub-alpine forests and scrubs, alpine pastures, dwarf Juniper scrub, and dry alpine scrub communities (Champion and Seth 1968).

Kinnaur is a northeastern frontier district in the state of Himachal Pradesh that mostly consists of the valleys along river Sutlej and its tributaries (Spiti and Baspa rivers, Figure 1). The terrain is rugged with steep precipitous slopes and narrow valleys (Figures 2 A- C). The wide range of altitudinal and climatic geospatial gradients have endowed the landscape with a rich botanic diversity, dominated by conifers in the temperate zone (Figures 3 A-C), *Betula utilis*-dominated forests and *Rhododendron campanulatum*-dominated scrubs in the sub-alpine zone (Figures 3 D, E), medicinal and aromatic herbs in the alpine meadows (Figures 3 F-H) and scrubby vegetation in the cold arid zone (Figure 3I). In Kinnaur, there are three, almost parallel mountain ranges: the Zaskar, the Great Himalaya and the Dhauladhar with their peaks varying between 5,180 m to 6,770 m and covered with snow throughout the year. Based on the amount and distribution of precipitation (rainfall and snowfall), the region is classified into three broad climatic zones: the wet zone (Nichear and Sangla areas), the dry zone (Kalpa and Moorang areas) and the arid zone (Pooh area). Only the area south of the Great Himalayan range receives the monsoon rains. The rainfall becomes lesser towards Shipki peak, the highest peak in Himachal Pradesh so that the climate of north eastern Kinnaur is semiarid to arid. The

annual rainfall varies from 45.4 mm at Pooh to 380 mm at Nichar. In the temperate zone, the minimum temperature ranges from -6.9 to 14.6°C and maximum from 7.5 to 23.1°C, the mean January temperature being about 0.3°C (Source: Office of the Deputy Commissioner, Rekonig Peo, Kinnaur (H.P.), India). Seasons of the year comprise of winter from December to end of March, followed by spring season from April to May and summer from June to September, with rains in the months of July and August particularly at lower elevations of Kinnaur. Autumn season spans over October to November.

Based on the classification given by Champion and Seth (Champion and Seth 1968), the vegetation of this region can be classified into 29 types which belong to Himalayan moist and dry temperate forests, sub-alpine forests, dry and moist alpine scrub and meadows. Alpine meadows cover large areas above the tree line (usually above 3300 amsl). Below the tree line, thick coniferous forests are dominated by *Cedrus deodara* (Chawla et al. 2011). *Pinus gerardiana* (Chilgoza or Neoza pine) dominated forest occupies large area in the dry zone up to tree line in Kinnaur. This species occurs mostly in Kinnaur district in the state of Himachal Pradesh. The economy of Kinnaur district is mainly dependent on apple cultivation. Among the agro-ecosystems, besides Chilgoza forest plantations and other agricultural crops, apple orchards constitute a major land use in the whole valley (Figures 4 A-E).

Though the flora for Himachal Pradesh (Chowdhery and Wadhwa 1984) presents an extensive list of species distributed across the state, the vegetation in Kinnaur has

not been precisely investigated. In spite of Kinnaur being a biodiversity rich region, no attempt has been made to list the species content of this district and no comparative botanic studies have been carried out between Kinnaur and the neighbouring districts. In this communication, we provide an updated checklist of vascular plants from different elevations representing all the vegetation types of Kinnaur as well as the species growing near streams, lakes, towns, orchards, villages and other human settlements in the region. We have used here the latest delineation of the families, 'Angiosperm Phylogeny Group (APG) III system, 2009'.

This study aims at finding out i) Is the flora of Kinnaur district dominated by the same families as those of other western Himalayan regions? ii) What are the family-to-genera and genera-to-species ratios in Kinnaur and are these comparable to other regions in western Himalaya?, and iii) What is the proportion of threatened and endemic species in the flora of Kinnaur district?

MATERIALS AND METHODS

Study Sites

The present study was undertaken in Kinnaur (30°22'40" N to 33°12'40" N Latitude and 75°47'55" E to 79°04'20" E Longitude), which spans over an area of over 6,400 km² in the western Himalaya (www.himachalgov.nic.in). River Sutlej enters the region at an elevation of 3,050 m, and leaves it at an elevation of 1,320 m above mean sea level dividing the region into almost two equal halves (Figure 1).

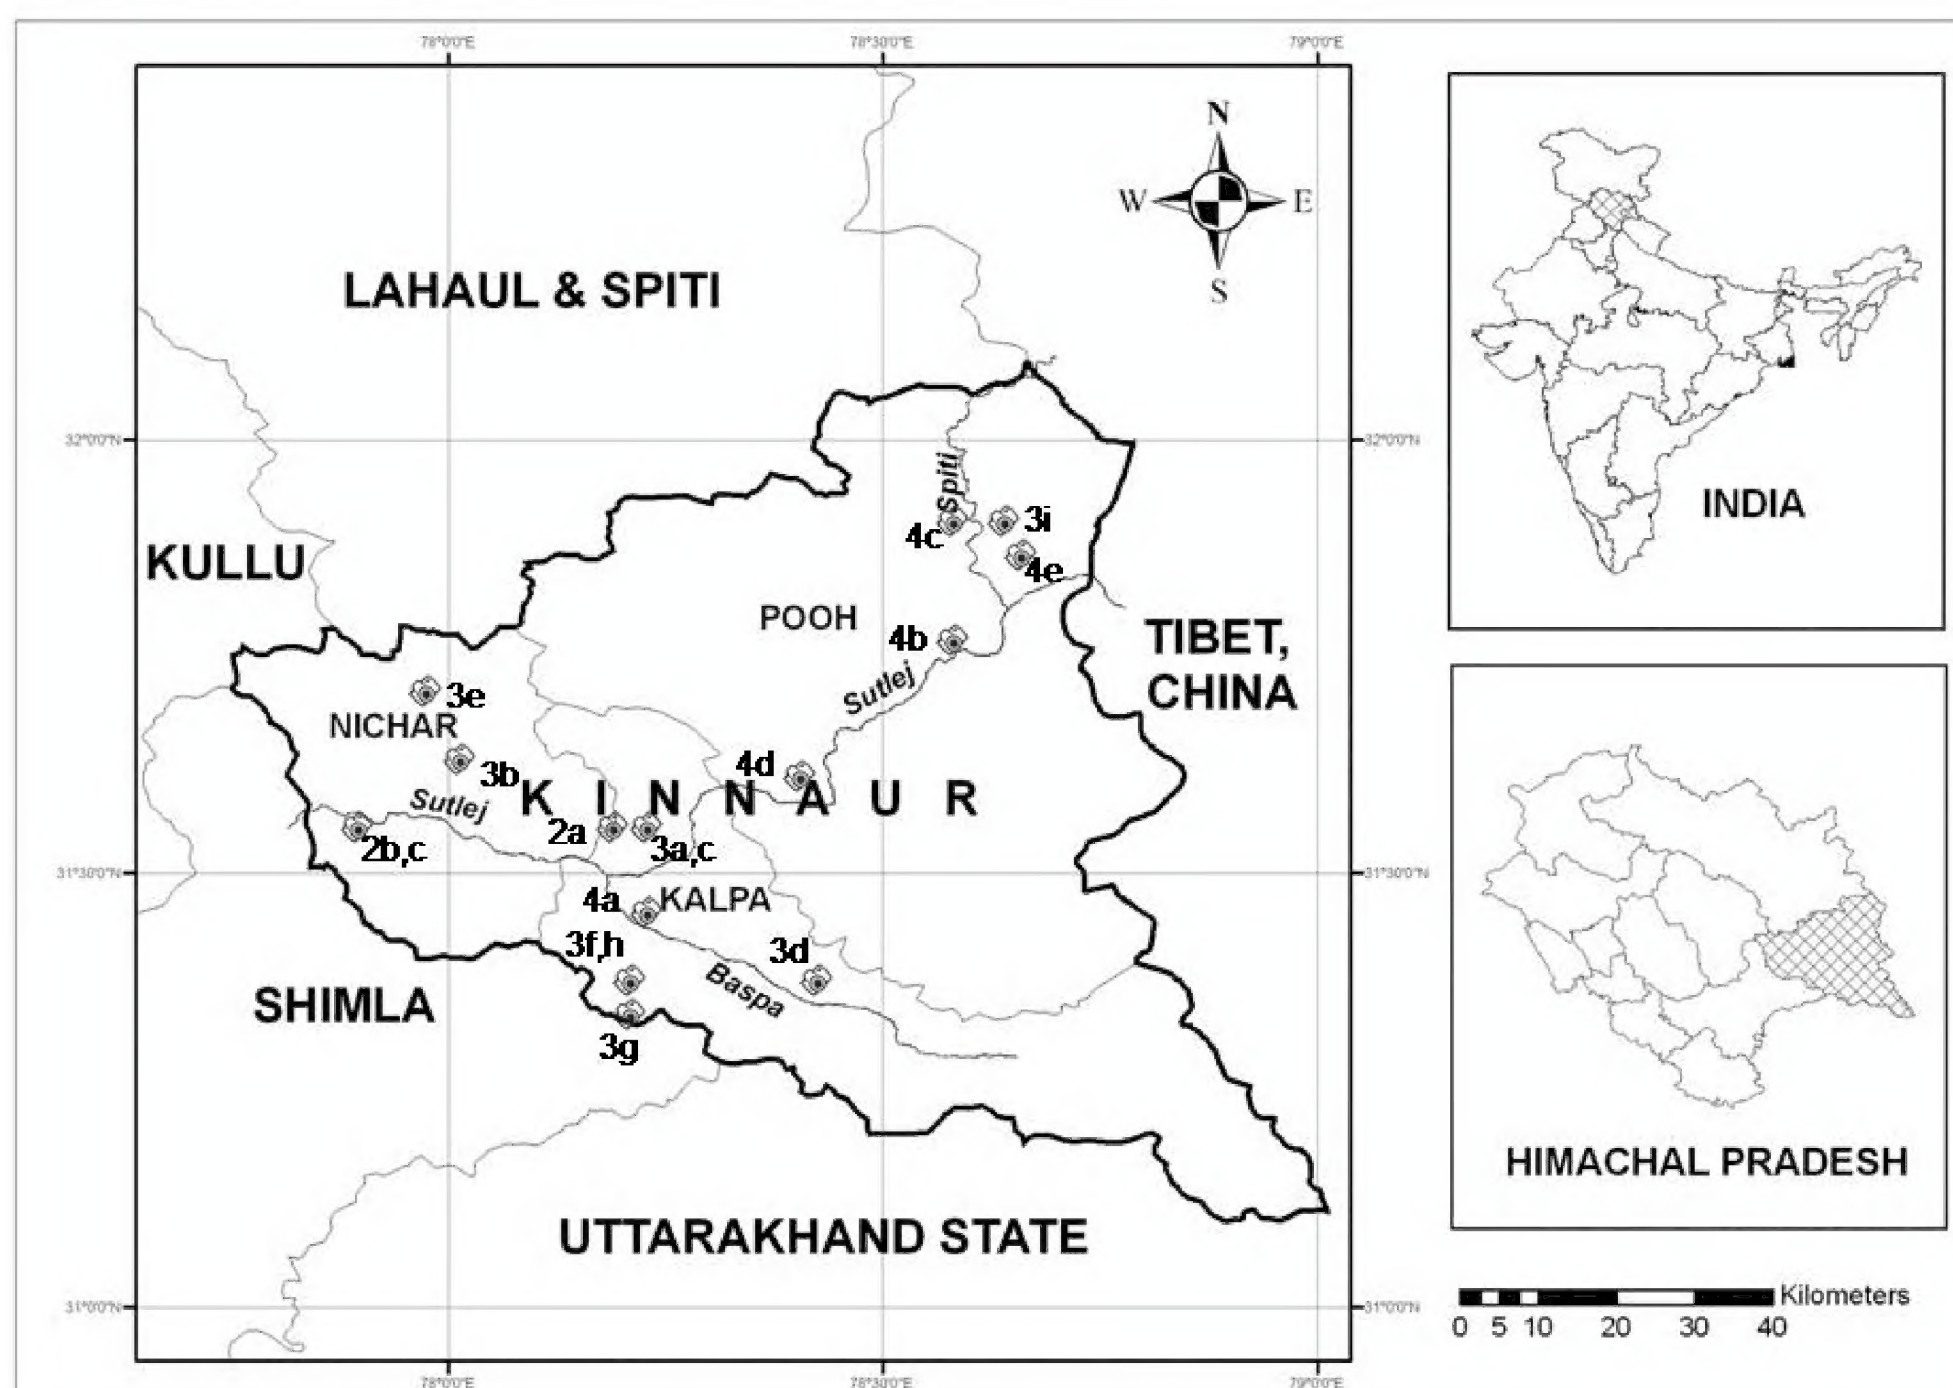

FIGURE 1. Map of the study area. The points at which the photographs have been clicked are shown on the map and are indicated by figure numbers.

Kinnaur is a region of high mountain ranges with narrow valleys of the river Satluj and its tributaries. In southern Kinnaur, the Dhauladhars extend eastwards to meet the Greater Himalayan range, and separate Baspa valley from district Shimla of Himachal Pradesh and Uttarkashi district of Uttarakhand state. Towards the north east, the semi-arid to arid land areas occur across the Zaskar mountains. The Greater Himalaya spans over

most of the geographical area of Kinnaur. The district has three administrative subdivisions, Pooh, Kalpa and Nichar. Pooh subdivision in the upper Kinnaur comprises three *tehsils* (an administrative unit under a district) of Moorang, Pooh and Yangthang. Kalpa subdivision situated in the middle Kinnaur, comprises of two *tehsils*, Kalpa and Sangla. Nichar subdivision in the lower Kinnaur has only one *tehsil* with the same name. The boundaries of the three sub-divisions are thus, co-terminus with the three ecological divisions of the area (Raha 2000). The upper Kinnaur consists of the last stretch of river Spiti which joins river Satluj at Khab, and the main Satluj valley from Shipki La to the Ropa valley lower down to village Shiasu. The gorge like valleys of this region present a cold desert landscape with naked mountains and a few villages with irrigated fields and apple orchards. Almost the whole landscape is covered with steppe vegetation dominated by *Artemisia* spp. scrub. The middle Kinnaur, represented by the Kinner Kailash Massif (highest peak, 6473 m), has beautiful Baspa (or Sangla) valley on one side and Kalpa on the other side reaching upstream the Satluj towards Charang stream. Sangla valley has temperate climate with lush green *Cedrus deodara*, *Abies pindrow* dominated forests, broadleaved forests and alpine meadows. Towards Kalpa, the climate gradually changes to semi-arid, with vegetation dominated by *Pinus gerardiana* forests. The lower Kinnaur receives the maximum rainfall during the monsoon season and is the greenest zone. The valleys of the tributaries of Satluj present a large altitudinal gradient and thus inhabit different forest types with large area under alpine meadows at higher elevations.

The 'Linear Imaging Self Scanner (LISS III)' sensor satellite image (ground resolution, 24.5 m and scene date, 15-Oct-2005) of Indian Remote Sensing (IRS) satellite was used to classify the vegetation of Kinnaur into forests, grasslands, scrublands, snow covered area, rocks and barren area, and cultivated and builtup area (Figure 5). More than half of the total area of Kinnaur (51.91 %) is covered by bare rocks and perpetual snow. Only 44.2 % of the total area of Kinnaur is represented by forests (10.24 %), grasslands (31.04 %) and scrublands (2.95 %) (Chawla *et al.* 2011). The localities and the points of collections are depicted on the classified map. The areas surveyed in the lower Kinnaur represent an altitudinal range from 1500 m to 4600 m that include major localities viz., Solding, Nigulseri, Bhabhanagar, Bari, Nichar on the left bank of river Satluj; Majhgaon in the Rupi valley, and Rarang Panoong, Surchoo, Kafnu, Mulling, Fusteerang, Tau Dor, Kara, Fusteerang in the Bhabha valley on the right banks of river Satluj; and Sholtu, Tapri, Urni further upstream on both the banks of river Satluj. In the middle Kinnaur, the localities surveyed included Kuppa, Sangla, Kharogla, Chitkul, Chansu, Rupin Pass, Nalgon Pass in the Sangla valley encompassing a range of altitudes from 2500 m in Sangla valley to 5200 m towards the Chitkul pass. Besides, Roghi, Kalpa, Sharbo and Pangri, localities were surveyed in the Chilgoza pine dominated zone. The upper Kinnaur presents an arid zone and the studied localities include Ropa valley, Kanam, Jangi, Ribba, Moorang, Thangi, alpine meadows in Charang valley, and cold desert areas of Pooh (Pooh, Chulling, Yangthang, Nako *etc.*).

FIGURE 2. A) An Upper Satluj valley landscape (semi-arid zone) with forests dominated by *Pinus gerardiana*, and apple orchards. B) The lower Satluj valley landscape in the Nichar subdivision with scrub, coniferous and *Betula* dominated forests on the upper reaches of mountains, and apple orchards in the lower elevations. C) A degraded forest landscape due to construction of roads and dams, and expansion of agricultural land and orchards.

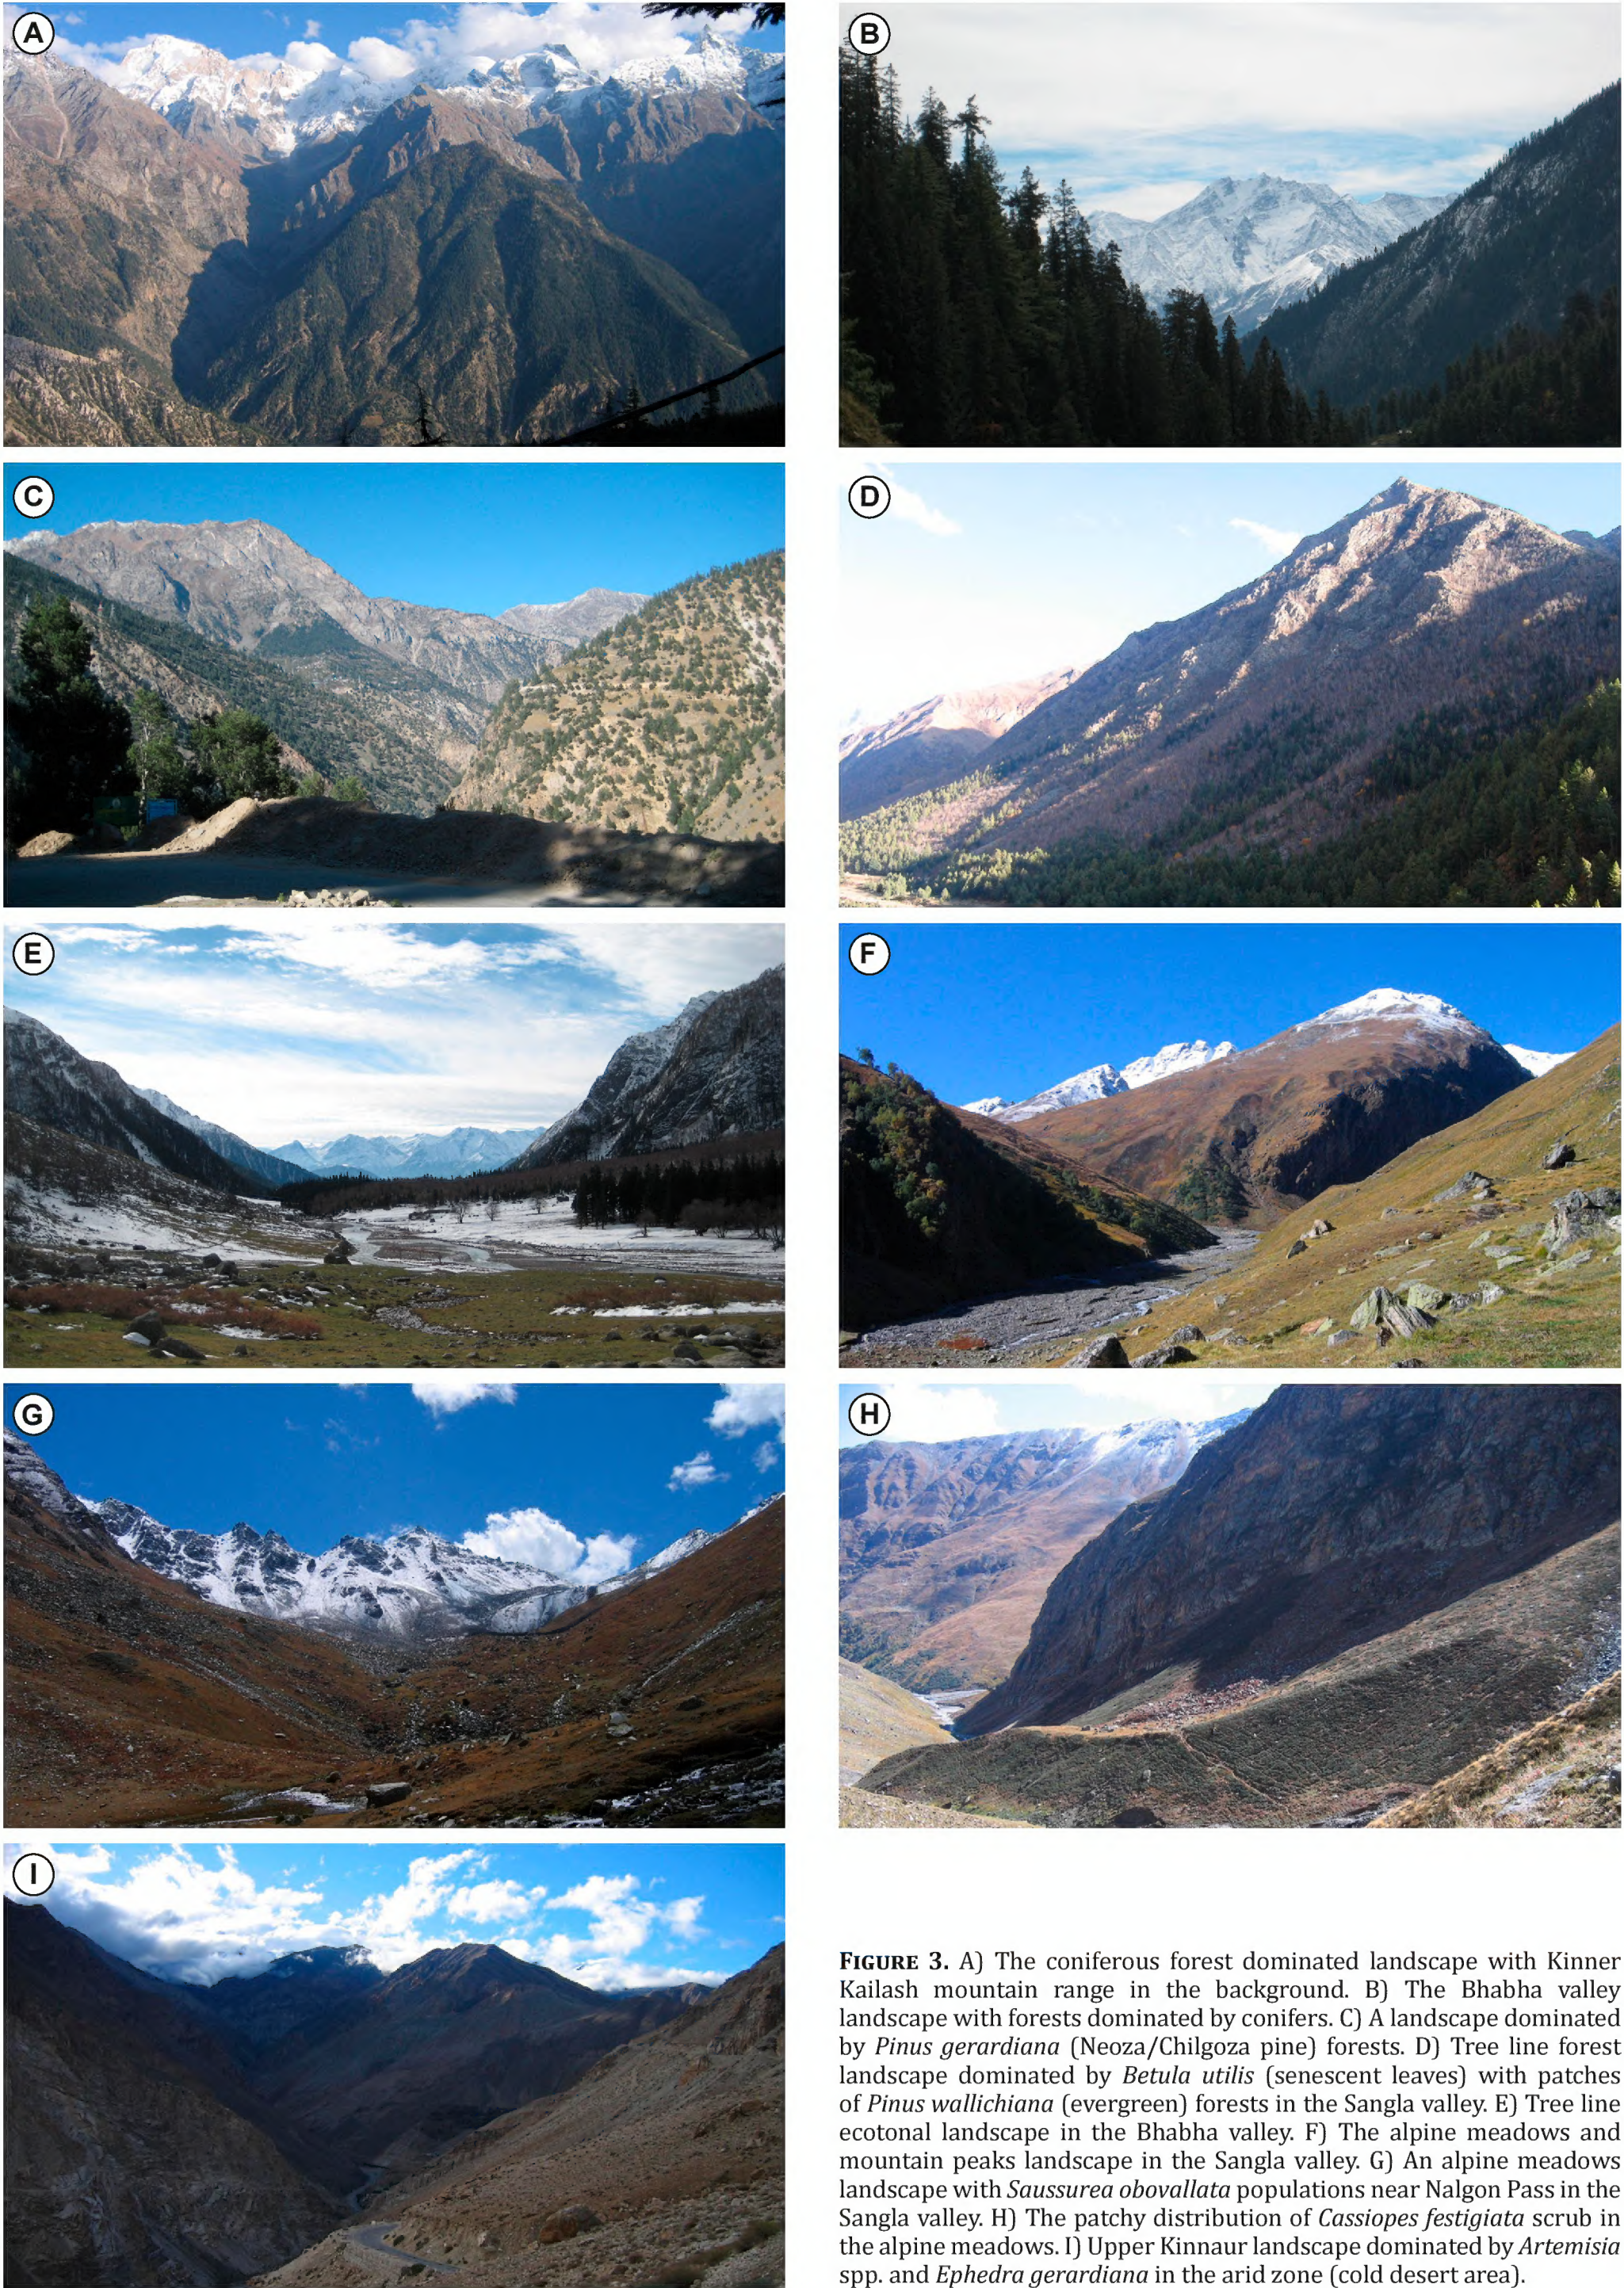

FIGURE 3. A) The coniferous forest dominated landscape with Kinner Kailash mountain range in the background. B) The Bhabha valley landscape with forests dominated by conifers. C) A landscape dominated by *Pinus gerardiana* (Neoza/Chilgoza pine) forests. D) Tree line forest landscape dominated by *Betula utilis* (senescent leaves) with patches of *Pinus wallichiana* (evergreen) forests in the Sangla valley. E) Tree line ecotonal landscape in the Bhabha valley. F) The alpine meadows and mountain peaks landscape in the Sangla valley. G) An alpine meadows landscape with *Saussurea obovallata* populations near Nalgon Pass in the Sangla valley. H) The patchy distribution of *Cassiopes festigiata* scrub in the alpine meadows. I) Upper Kinnaur landscape dominated by *Artemisia* spp. and *Ephedra gerardiana* in the arid zone (cold desert area).

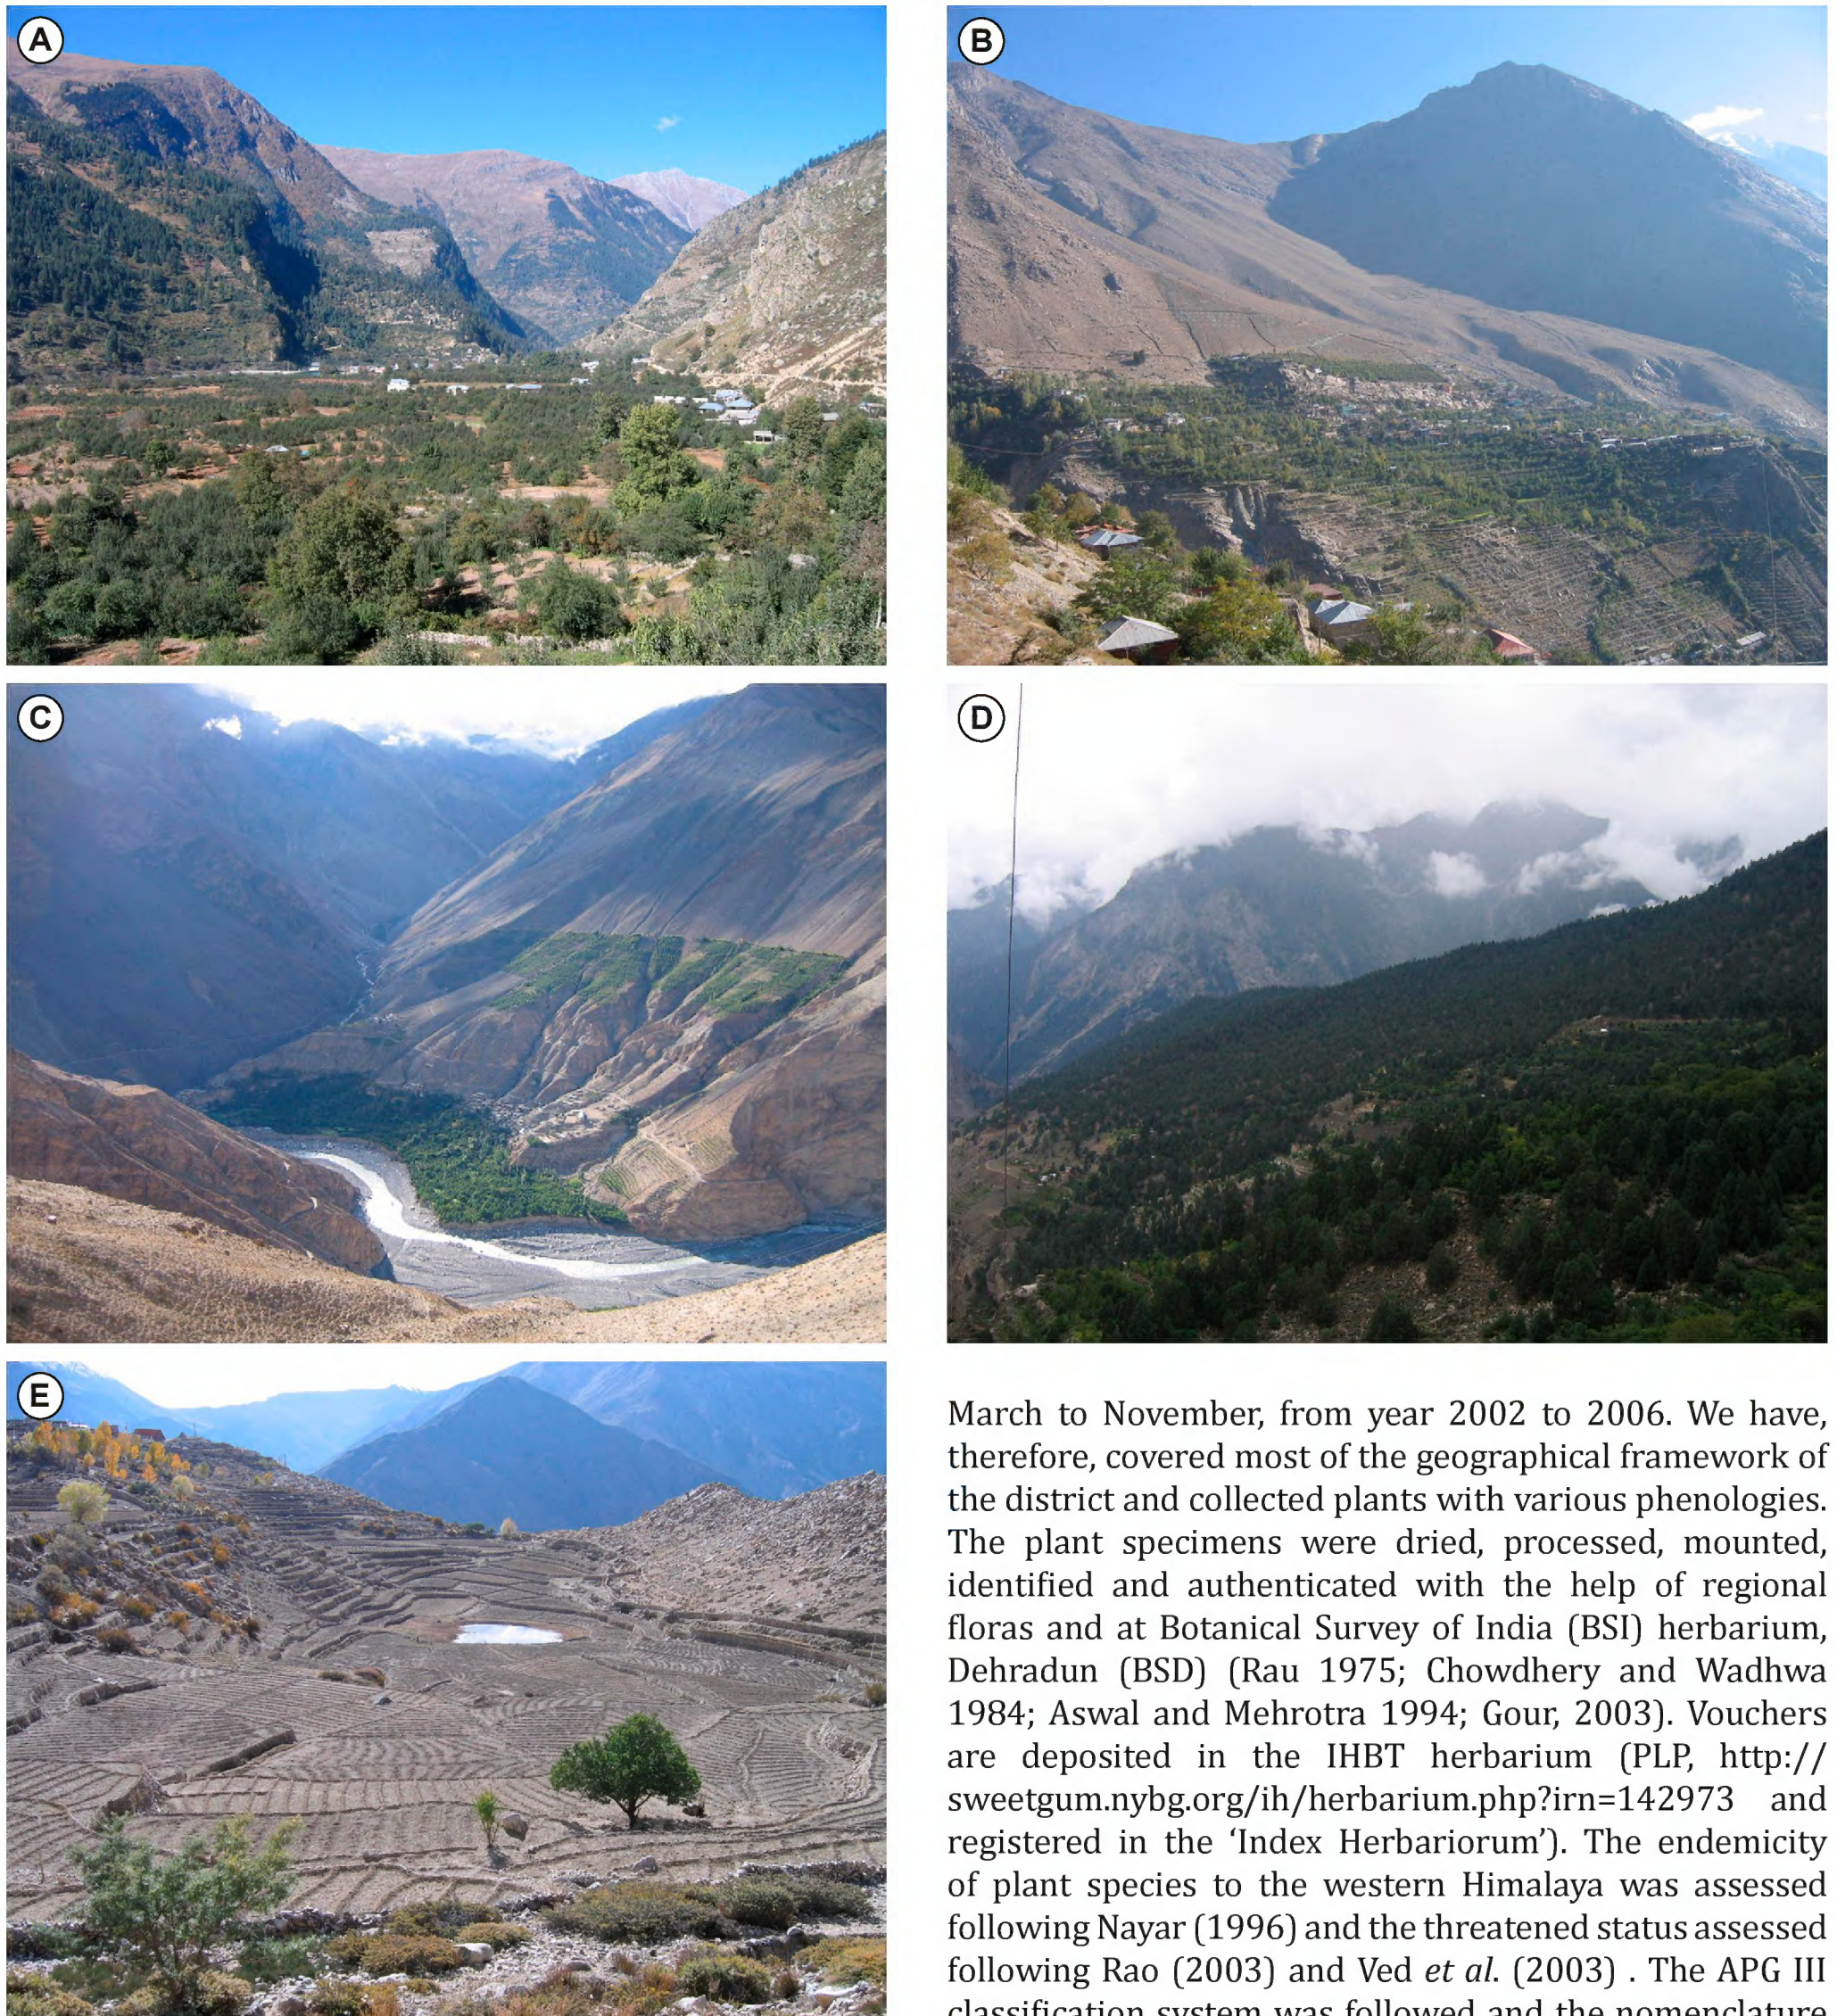

FIGURE 4. A) Apple orchards dominated landscape in the Sangla valley. B) A high altitude village agro-ecosystem in Upper Kinnaur (Pooh). C) Apple orchards in the cold desert zone (Leo village, on the right bank of Spiti river). D) Neoza forest (*Pinus gerardiana*) at Jangi in the upper Kinnaur. E) Agricultural fields in Nako in upper Kinnaur.

Data Collection

Systematic surveys were conducted in district Kinnaur to cover different altitudinal zones, to include all representative vegetation types: forests, scrubs, temperate grasslands, alpine meadows, vegetation transitional zones and anthropogenized environments. Alpine grasslands differ from the temperate grasslands in terms of species composition and diversity due to altitudinal gradient. Surveys were conducted during the snow free period of

March to November, from year 2002 to 2006. We have, therefore, covered most of the geographical framework of the district and collected plants with various phenologies. The plant specimens were dried, processed, mounted, identified and authenticated with the help of regional floras and at Botanical Survey of India (BSI) herbarium, Dehradun (BSD) (Rau 1975; Chowdhery and Wadhwa 1984; Aswal and Mehrotra 1994; Gour, 2003). Vouchers are deposited in the IHBT herbarium (PLP, <http://sweetgum.nybg.org/ih/herbarium.php?irn=142973> and registered in the 'Index Herbariorum'). The endemism of plant species to the western Himalaya was assessed following Nayar (1996) and the threatened status assessed following Rao (2003) and Ved *et al.* (2003). The APG III classification system was followed and the nomenclature was updated from the website 'www.theplantlist.org'. The delineation of only a few dominant families has changed in the APG III system with re-structuring of genera *e.g.*, genera from Scrophulariaceae now belong to Orobanchaceae, Plantaginaceae *etc.* Thus, comparison of floristic summaries of the present checklist with those of the previous lists from other regions in the Himalaya remains minimally affected.

RESULTS AND DISCUSSION

A total of 893 taxa (*viz.*, species, subspecies and varieties) belonging to 881 plant species, 433 genera and 102 families of higher plants, and 30 species of ferns and fern allies were recorded from the study area (Tables 1,2).

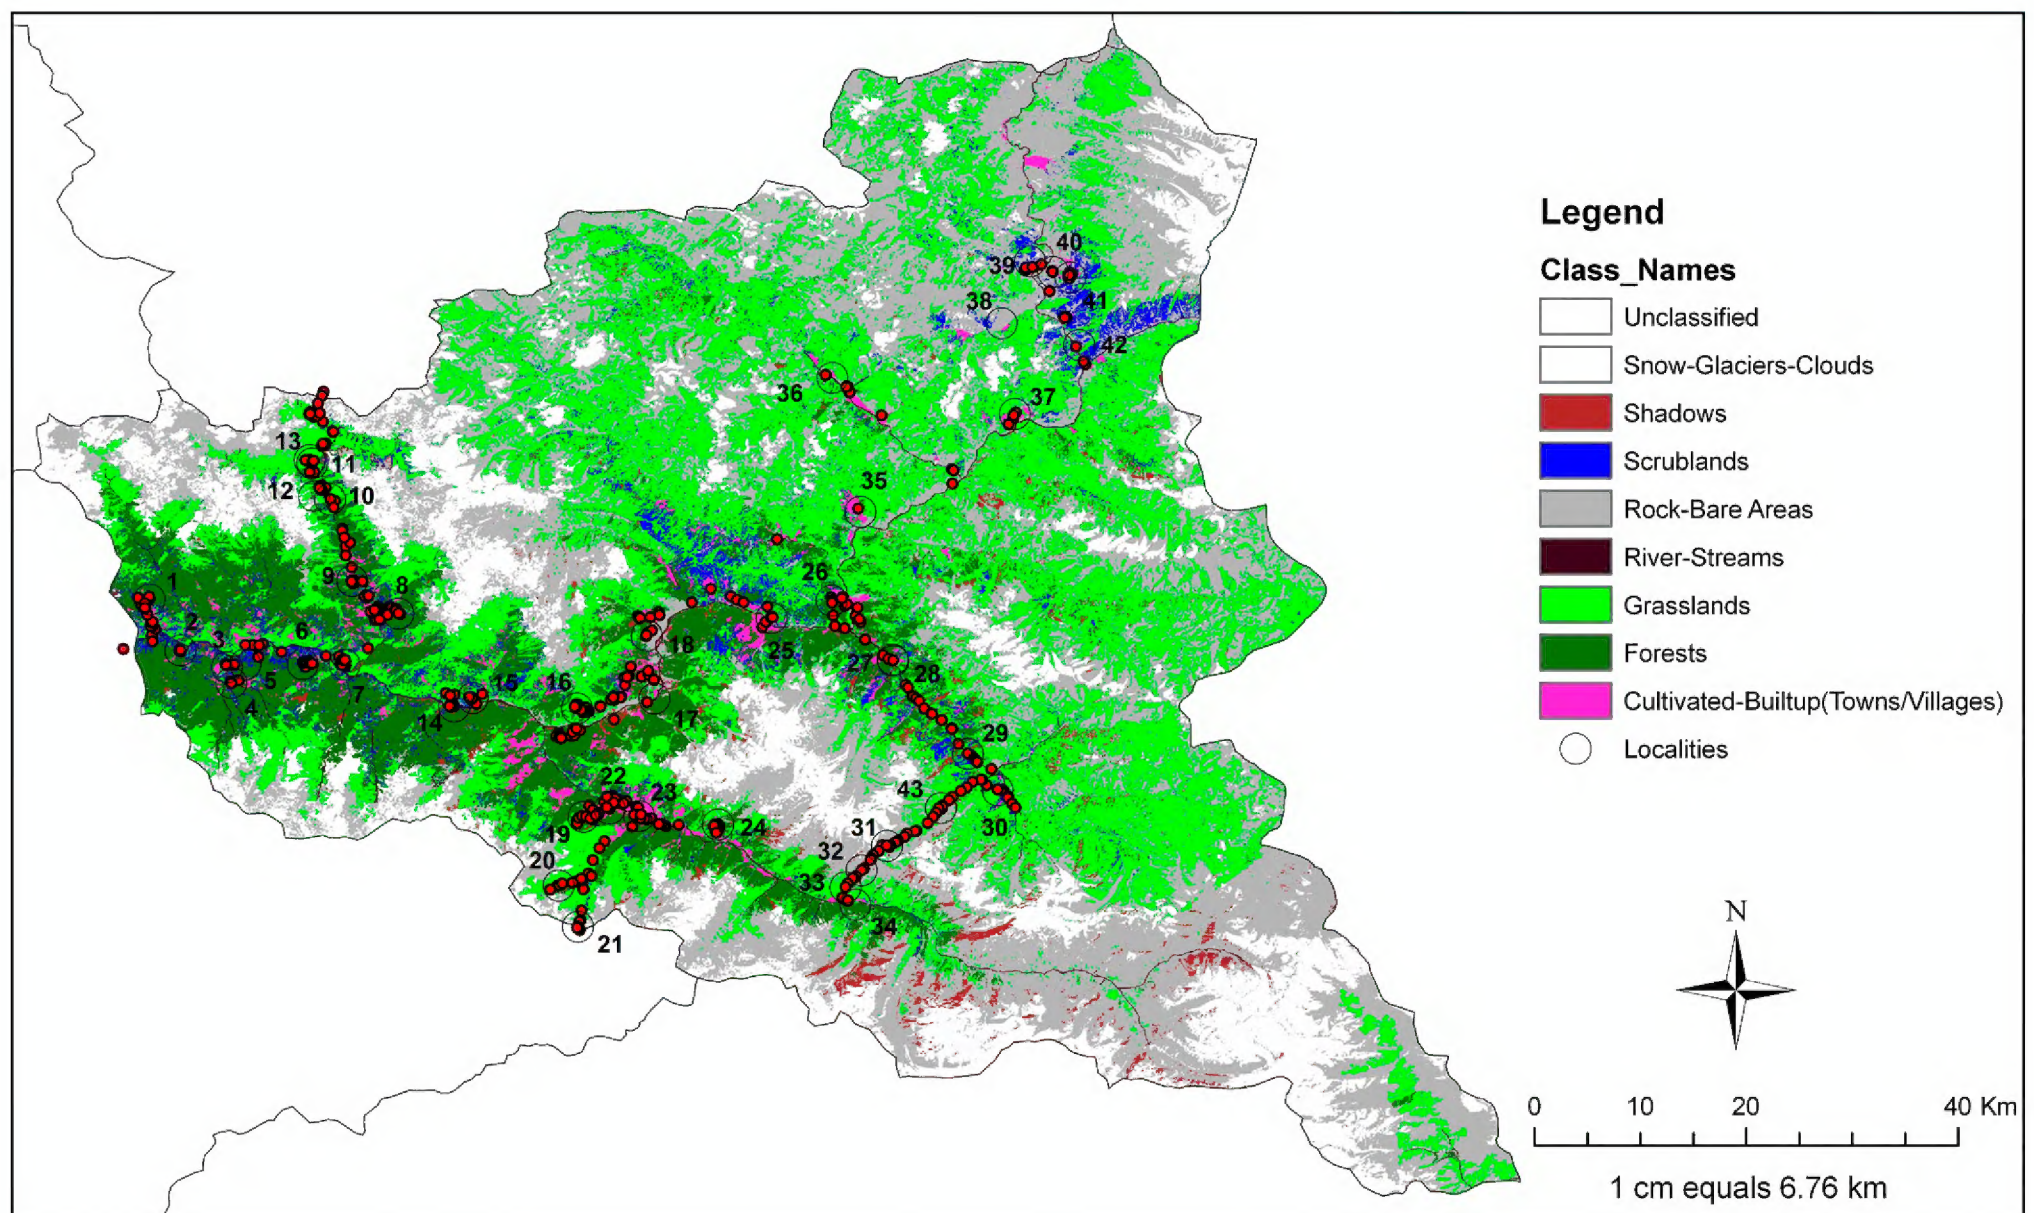

FIGURE 5. Classified map of Kinnaur showing the area under forests, grasslands and scrublands. The localities and points of collections are depicted in this map as circles and points respectively. The codes for localities are as follows: 1 Majhgaon, Rup, 2432m; 2 Nigulseri, 1763m (figure 2B, 2C); 3 Bari, 1869m; 4 Solding, 1545m; 5 Bhabhanagar, 1572m; 6 Nichar, 2298m; 7 Rarang Panoong, 1843m; 8 Surchoo, 2695m; 9 Kafnu, 2450m (figure 3B); 10 Mulling, 3250m (figure 3E); 11 Fusteerang, 4166m; 12 Tau Dor, 3440m; 13 Kara, 3462m; 14 Sholtu, Tapri, 1762m; 15 Urni (Figure 2A), 2238m; 16 Roghi, Kalpa, 3532m; 17 Sharbo, 2304m (figure 3A, figure 3C); 18 Pang, 2651m; 19 Chansu, 3628m; 20 Rupin Pass, 3739m (figure 3F, figure 3H); 21 Nalgon Pass, 4432m (figure 3G); 22 Kuppa, Sangla, 2547m (figure 4A); 23 Sangla, 2641m; 24 Kharogla, 3086m; 25 Khadra, Moorang, 2434m; 26 Jangi, 2737m (figure 4D); 27 Ribba, 2711m; 28 Thangi, 2666m; 29 Lambar, 3392m; 30 Charang, 3899m; 31 Chitkul Pass (Base camp), 4865m; 32 Chitkul Pass beyond, 4725m; 33 Towards Chitkul, 3726m; 34 Chitkul, 3492m (figure 3D); 35 Kanam, 2858m; 36 Ropa, 3047m; 37 Pooh, 2852m (figure 4B); 38 Chulling, 3234m; 39 Leo, 3113m (figure 4C); 40 Yangthang, 3296m (figure 3I); 41 Nako, 3710m (figure 4E); 42 Ka, 2848m; 43 Lalanti, 4278m.

Among species of higher plants, 869 are angiosperms and 13 are gymnosperms (Table 3). Chowdhery and Wadhwa (1984) reported 3243 species of angiosperms from Himachal Pradesh, 26.8% of which are accounted in Kinnaur.

In Kinnaur, the ten most dominant families are Asteraceae (122 species), Poaceae (69), Rosaceae (58), Leguminosae (49), Lamiaceae (38), Ranunculaceae (30), Brassicaceae (29), Polygonaceae (29), Apiaceae (25) and Caryophyllaceae (22). Altogether, they constitute 53.4 % of the total number of species in Kinnaur and 48.7 % of the genera occurring in this region. The flora of Kinnaur has close affinities with the flora of the adjacent district of Lahaul and Spiti with eight of the ten families being dominant in both of the regions, whereas Lamiaceae and Caryophyllaceae dominate only in Kinnaur (Aswal and Mehrotra 1994) (Table 4). The upper Kinnaur has a similar climate as that of the Spiti region of the Lahaul and Spiti district. It may be noted that Asteraceae, which is the most represented family in Kinnaur and Lahaul and Spiti, ranks second, fourth, and seventh in western Himalaya, eastern Himalaya, and the Flora of British India, respectively (Hooker 1904; Hara and Hohashi 1966-1974; Rau 1975). Orchidaceae, a prominent family in the eastern Himalaya and the Flora of British India, which ranks ninth in western Himalaya, does not even appear among the first 10 dominant families of Kinnaur and Lahaul and Spiti). Most of the area under Kinnaur and Lahaul and Spiti

districts has semi-arid to arid climates with scanty rainfall and thus almost no epiphytic orchids can be found in this region. The opposite trend was found for the Brassicaceae. This family occupies the sixth, third and seventh positions in Kinnaur, Lahaul and Spiti and western Himalaya respectively, but does not figure among the 10 dominant families in the eastern Himalaya and British India flora. Poaceae, the second most prominent family in both Kinnaur and Lahaul and Spiti districts, is also a prominent family in district Shimla. This may be due to large cover of grasslands (especially alpine meadows) and dry areas in the first two districts. However in Shimla, the large occurrence of grasses may be the result of anthropogenic influences.

The taxonomic structure of biotas which can be measured as the ratio of family-to-genera, genera-to-species, or family-to-species, does not vary randomly on regional or global scales (Krug *et al.* 2007). The species-genus (S/G) ratios are sensitive to diversity and increase with number of species in the sample (Jarvinen 1982). In Kinnaur, the ratio of family-to-genera is 1:4.25 and genera-to-species is 1:2.04. The genera-to-species ratio of Kinnaur is similar to that of Shimla (1:2.08), Lahaul and Spiti (1:2.5), Mussoorie (1:1.88), Nainital (1:1.9) and other areas of western Himalaya (Table 5). All of the above mentioned areas have been found to host roughly the same number of species (~700 to 1300 spp.) except for Srinagar and Garhwal. In Srinagar, the genera-to-species

ratio (1:3.95) is slightly higher, whereas, in Garhwal, this remains similar to other regions, but the family-to-genera ratio is higher (1:5.46). Moreover, different regions compared are also mesoscale landscapes (~10² to 10⁴ km². area). Thus, it may be inferred that overall the family-to-genera and genera-to-species ratios are stable throughout the western Himalaya.

There are 9 families each with 10 genera or more and these 9 families together represent 49.65 % of the total genera observed. Similarly, 24 families have 10 species or more accounting for 74.58 % of the total taxa. A total of 253 (58.43 %) genera are represented by single species. Furthermore, 54 families, represented by a low number of species (3 or less), abound in the study area. There are 46 (45.1 %) families represented by a single genus, and 26 (25.5 %) families represented by a single species. This shows the dominance of families with less taxa which make up the flora of the region.

Our checklist includes 606 herbs, 63 trees, 108 shrubs, 28 climbers, 67 graminoids and 21 sedges and rushes (Figure 6a). Herbs are dominant since grasslands cover a large portion of the landscape. The tree diversity in the western Himalaya is considerably low compared to that in the eastern Himalaya. Most likely, low precipitation limits tree growth in western Himalaya. Out of total 881 species, 108 (12.2 %) are endemic to western Himalaya and 27 (3 %) have been placed under IUCN threatened categories for Himachal Pradesh (Figures 6b and 6c). Out of total 27 threatened species, 14 species are vulnerable, 7 are endangered and 1 is critically endangered in this region (Figure 6d). The collection of several species for traditional medicine or ornamental purposes could be at the origin of their rarity. The populations of the terrestrial orchid *Dactylorhiza hatagirea* (locally known as Hathpanja, referring to its roots resembling a baby's hand with five fingers) have critically dwindled. It is collected for its roots which have important medicinal properties viz., aphrodisiac, general weakness, bone fracture, cough, stomach ache etc. The endangered medicinal plant species viz., *Sinopodophyllum hexandrum*, *Picrorhiza kurrooa*, and *Aconitum heterophyllum* are illegally extracted in very large quantities from alpine meadows. Similarly, *Jurinea dolomiaea* is also extracted in large quantities and its populations are also decreasing in the district. Further, it is very rare to find *Saussurea obvalata*, which locals call as 'Brahmkamal', because it's beautiful, and fragrant flowers are commonly collected as an offering to the Gods. We could find this species in only two localities in Kinnaur viz., Nalgon Pass (~4600 m amsl) and Chitkul Pass (~4900-5000 m amsl), population in the latter area containing only a few plants. The trees *Ulmus wallichiana* and *Betula utilis* fall under the 'endangered' category, while *Pinus gerardiana* or 'Chilgoza pine' is under the rare category. The latter tree is prominent in this region of Himachal Pradesh. However, *Betula utilis* or 'Bhoj patra' which forms the tree line (at ~ 3300-3500 m amsl) and is reported as 'endangered' in Himachal Pradesh, was observed in large populations in Kinnaur, especially in the Sangla valley. Therefore, efforts should be made to conserve this species in Kinnaur. Further studies in this region should focus on regular 'quantitative assessments' of the populations of threatened species listed in the present study.

The checklist of Kinnaur will help in undertaking further studies on quantitative assessments of plant species making use of remote sensing and mapping technologies. The vegetation of Kinnaur district is undergoing rapid destruction due to anthropogenic disturbances such as construction of roads, hydropower projects, illegal felling of trees, unreasonable extraction of medicinal plants, and expansion of orchards and agricultural lands. The present

FIGURE 6. A) The proportion of different growth forms in the flora of Kinnaur. B) The proportion of endemic and threatened plants in Kinnaur. C) The proportion of different IUCN risk categories among the threatened plants of Kinnaur. D) The proportion of ten dominant families in kinnaur in terms of species richness.

study provides an updated checklist of the vascular plants occurring in Kinnaur by extensive collections throughout the district, and includes a list of endemic and threatened species. Further research should now focus on the quantitative assesement of these plants throughtout the landscape and to identify potential areas for conservation. Besides this, the biodiversity studies of the area should be performed along with a study of environmental variables

viz., topographic, edaphic and climatic attributes. The population dynamics of plant species along the altitudinal gradient could be studied by establishing permanent monitoring plots (PMPs) in the areas identified for potential conservation, which will also help in elucidating the effect of climate change on the distribution of plant species and their communities.

TABLE 1. List of higher plant species found in Kinnaur.

SPECIES	VOUCHER SPECIMEN NO.	HABIT	ENDEMIC / THREATENED STATUS	HABITAT / LOCALITY
Acanthaceae

SPECIES	VOUCHER SPECIMEN NO.	HABIT	ENDEMIC / THREATENED STATUS	HABITAT / LOCALITY
Oxalidaceae				
<i>Oxalis acetosella</i> L.	PLP9635	Herb	-	Sangla
<i>Oxalis corniculata</i> L.	PLP2578	Herb	-	F, G, S
Papaveraceae				
<i>Corydalis cashmeriana</i> Royle	PLP9848	Herb	-	GA
<i>Corydalis cornuta</i> Royle	PLP3235	Herb	-	F, GA
<i>Corydalis govaniana</i> Wall.	PLP3626	Herb	Endemic	Hoye
<i>Corydalis meifolia</i> Wall.	PLP3292	Herb	-	GA
<i>Corydalis moorcroftiana</i> Wall. ex Hook. f. and Thomson	PLP11300	Herb	-	F
<i>Corydalis vaginans</i> Royle (Syn. <i>C. ramosa</i> Hook. f. and Thomson)	PLP9743	Herb	-	GA
<i>Fumaria indica</i> (Haussk.) Pugsley	PLP2663	Herb	-	Karaba, Boktu
<i>Meconopsis aculeata</i> Royle	PLP3216	Herb	Endemic and Vulnerable	GA
<i>Papaver dubium</i> L.	PLP2596	Herb	-	Katgaon
<i>Papaver nudicaule</i> L.	PLP2767	Herb	-	Sangla
<i>Papaver somniferum</i> L.	PLP9806	Herb	-	F
Parnessiaceae				
<i>Parnassia laxmanii</i> Pall. ex Schult.	PLP3141	Herb	-	GA
<i>Parnassia nubicola</i> Wall. ex Royle	PLP8507	Herb	-	F
Phrymaceae				
<i>Lancea tibetica</i> Hook. f and Thomson	PLP6327	Herb	-	Nako
<i>Mazus surculosus</i> D. Don	PLP7988	Herb	-	F
Phyllanthaceae				
<i>Leptopus cordifolius</i> Decne. (Syn. <i>Andrachne cordifolia</i> (Decne.) Müll. Arg.)	PLP2539	Shrub	-	Bhabhanagar
Phytolacaceae				
<i>Phytolacca acinosa</i> Roxb.	PLP9812	Herb	-	Nichar, Sangla
Piperaceae				
<i>Peperomia tetraphylla</i> (G. Forst.) Hook. and Arn.	PLP2687	Herb	-	Wangtoo
Plantaginaceae				
<i>Hemiphragma heterophyllum</i> Wall.	PLP7967	Herb	-	Rupi
<i>Hippuris vulgaris</i> L.	PLP7670	Herb	-	Rupi
<i>Picrorhiza kurrooa</i> Royle ex Benth.	PLP3255	Herb	Endemic and Endangered	GA
<i>Plantago depressa</i> Willd.	PLP2821	Herb	-	F, G, GA
<i>Plantago erosa</i> Wall.	PLP6242	Herb	-	Sangla
<i>Plantago himalaica</i> Pilg.	PLP2733	Herb	-	G, S
<i>Plantago major</i> L.	PLP2984	Herb	-	F
<i>Veronica agrestis</i> L.	PLP2785	Herb	-	Kuppa
<i>Veronica beccabunga</i> L.	PLP3272	Herb	-	GA
<i>Veronica biloba</i> L.	PLP2644	Herb	-	Kalpa
<i>Veronica hederifolia</i> L.	PLP2645	Herb	-	Rekong Peo
<i>Veronica lanosa</i> Royle ex Benth.	PLP7445	Herb	Endemic	GA
<i>Veronica persica</i> Poir.	PLP3381	Herb	-	Sangla
Poaceae				
<i>Agrostis canina</i> L.	PLP9801	Grass	-	GA
<i>Agrostis munroana</i> Aitch. and Hemsl.	PLP9649	Grass	Endemic	G
<i>Agrostis pilosula</i> Trin.	PLP11236	Grass	-	GA
<i>Alopecurus arundinaceus</i> Poir	PLP2804	Grass	-	G, S
<i>Andropogon munroi</i> C.B. Clarke	PLP2651	Grass	-	Katgaon, Kafnu
<i>Apluda mutica</i> L.	PLP2662	Grass	-	Urni
<i>Arundo donax</i> L.	PLP3556	Grass	-	S
<i>Brachypodium distachyon</i> (L.) P. Beauv.	PLP9665	Grass	-	GA
<i>Brachypodium sylvaticum</i> (Huds.) P. Beauv.	PLP2653	Grass	-	S
<i>Bromus arvensis</i> L.	PLP5032	Grass	-	F
<i>Bromus catharticus</i> Vahl (Syn. <i>B. uniloides</i> Kunth.)	PLP3033	Grass	-	Surchoo
<i>Bromus japonicus</i> Thunb.	PLP2652	Grass	-	Kalpa
<i>Bromus lanceolatus</i> Roth	PLP6320	Grass	-	Shyasu Khud
<i>Bromus pectinatus</i> Thunb.	PLP2592	Grass	-	F, GA, S

TABLE 1. CONTINUED.

SPECIES	VOUCHER SPECIMEN NO.	HABIT	ENDEMIC / THREATENED STATUS	HABITAT / LOCALITY
<i>Calamagrostis pseudophragmites</i> (Haller) Koeler	PLP3549	Grass	-	Kafnu, Kharogla
<i>Chrysopogon gryllus</i> (L.) Trin. (Syn. <i>C. echinulatus</i> (Nees) W. Watson)	PLP7993	Grass	-	F, GA
<i>Cymbopogon distans</i> (Nees ex Steud.) W. Watson	PLP2876	Grass	-	S
<i>Cymbopogon jawarancusa</i> (Jones) Schult	PLP2972	Grass	-	Rarang Panoong
<i>Cymbopogon martinii</i> (Roxb.) W. Watson	PLP8551	Grass	-	Katgaon
<i>Cymbopogon pospischilii</i> (K. Schum.) C.E. Hubb. (Syn. <i>C. stracheyi</i> (Hook. f.) Raizada and S.K. Jain)	PLP3105	Grass	-	F, S
<i>Cynodon dactylon</i> (L.) Pers.	PLP2540	Grass	-	F, G, S
<i>Dactylis glomerata</i> L.	PLP3586	Grass	-	F, G, GA
<i>Danthonia cachemyriana</i> Jaub. ex Spach.	PLP2520	Grass	-	GA
<i>Danthonia cumminsii</i> Hook. f. (Syn. <i>D. jacquemontii</i> Bor)	PLP9642	Grass	-	F, GA, G, S
<i>Digitaria cillaris</i> (Retz.) Koeler (Syn. <i>Digitaria adscendens</i> (Kunth) Henrard)	PLP7449	Grass	-	F, GA, S
<i>Digitaria cruciata</i> (Nees) A. Camus	PLP3123	Grass	-	G, GA
<i>Digitaria stricta</i> Roth	PLP4109	Grass	-	F
<i>Elymus nutans</i> Griseb.	PLP9751	Grass	-	S
<i>Elymus semicostatus</i> (Nees ex Steud.) Melderis	PLP7941	Grass	-	S
<i>Festuca undata</i> Stapf	PLP3577	Grass	-	Surchoo
<i>Festuca valesiaca</i> Schleich. ex Gaudin	PLP3260	Grass	-	GA
<i>Helictotrichon junghuhnii</i> (Buse) Henrard (Syn. <i>H. virescens</i> (Nees ex Steud.) Henrard)	PLP2914	Grass	-	Sangla
<i>Heteropogon contortus</i> (L.) P. Beauv. ex Roem. and Schult	PLP4169	Grass	-	Nichar
<i>Imperata cylindrica</i> (L.) Raeusch.	PLP3310	Herb	-	G
<i>Koeleria royleana</i> (L.) Pers.	PLP7486	Grass	-	S
<i>Koeleria macrantha</i> (Ledeb.) Schultes	PLP2909	Grass	-	Moorang
<i>Koeleria pyramidata</i> (Lam.) P. Beauv.(Syn. <i>K. cristata</i> (L.) Pers.)	PLP2624	Grass	-	F, GA, S
<i>Melica persica</i> Kunth	PLP9789	Grass	-	S
<i>Microstegium nudum</i> (Trin.) A. Camus	PLP7960	Grass	-	Solding
<i>Muhlenbergia duthieana</i> Hack.	PLP9415	Grass	-	GA
<i>Muhlenbergia himalayensis</i> Hack. ex Hook. f.	PLP6224	Grass	-	F
<i>Neyraudia arundinacea</i> (L.) Henr.	PLP6367	Grass	-	S
<i>Oplismenus compositus</i> (L.) P. Beauv.	PLP7609	Grass	-	F, S
<i>Oryzopsis aequiglumis</i> Duthie ex Hook. f.	PLP7497	Grass	-	F, GA
<i>Oryzopsis munroi</i> Stapf ex Hook. f.	PLP5029	Grass	-	F, S
<i>Oryzopsis vicaria</i> Grig. (Syn. <i>O. microcarpa</i> Pilg., <i>Piptatherum microcarpum</i> (Pilg.) Tzvelev)	PLP3183	Grass	-	Mulling, Jangi
<i>Pennisetum flaccidum</i> Griseb.	PLP3551	Grass	-	F, G
<i>Pennisetum glaucum</i> (L.) R. Br. (Syn. <i>Setaria glauca</i> (L.) P. Beauv.)	PLP8464	Grass	-	F
<i>Pennisetum lanatum</i> Klotzsch	PLP2861	Grass	-	F, GA, S
<i>Pennisetum orientale</i> Rich.	PLP6381	Grass	-	Bhabhanagar, Katgaon
<i>Phacelurus speciosus</i> (Steud.) C.E. Hubb	PLP2775	Grass	-	Urni
<i>Phleum alpinum</i> L.	PLP3193	Grass	-	GA
<i>Phleum himalaicum</i> Mez	PLP11335	Grass	-	F
<i>Phragmites karka</i> (Retz.) Trin. ex Steud.	PLP2514	Grass	-	F
<i>Poa annua</i> L.	PLP8545	Grass	-	F
<i>Poa polylea</i> Stapf	PLP6248	Grass	-	F
<i>Poa supina</i> Schrad.	PLP7462	Grass	-	F
<i>Polypogon fugax</i> Nees ex Steud.	PLP7615	Grass	-	F
<i>Saccharum filifolium</i> Steud.	PLP2837	Grass	-	Sangla
<i>Schizachyrium exile</i> (Hochst.) Pilg.	PLP2572	Grass	-	F, G
<i>Setaria pumila</i> (Poir.) Roem and Schult.	PLP3569	Grass	-	F
<i>Setaria viridis</i> (L.) P. Beauv.	PLP2827	Grass	-	Kafnu
<i>Stipa brandisii</i> Mez	PLP5044	Grass	-	F
<i>Themeda anathera</i> (Nees ex Steud.) Hack.	PLP3019	Grass	-	F
<i>Themeda arundinacea</i> (Roxb.) A. Camus	PLP3568	Grass	-	F, GA
<i>Themeda triandra</i> Forssk.	PLP2612	Grass	-	G
<i>Trisetum klarkei</i> (Hook. f.) R.R. Stewart	PLP7414	Grass	-	F, GA
<i>Trisetum spicatum</i> (L.) K. Richt.	PLP3192	Grass	-	F, GA

TABLE 1. CONTINUED.

SPECIES	VOUCHER SPECIMEN NO.	HABIT	ENDEMIC / THREATENED STATUS	HABITAT / LOCALITY
Polemoniaceae				
<i>Polemonium caeruleum</i> L.	PLP3395	Herb	-	Chansu
Polygalaceae				
<i>Polygala hottentotta</i> C. Presl (Syn. <i>P. abyssinica</i> R. Br. ex Fresen.)	PLP2716	Herb	-	Wangtoo
Polygonaceae				
<i>Bistorta vacciniifolia</i> (Wall. ex Meisn.) Greene (Syn. <i>Polygonum vacciniifolia</i>)	PLP9605	Herb	-	GA
<i>Fagopyrum esculentum</i> Moench	PLP2597	Herb	-	F, S
<i>Fagopyrum tataricum</i> (L.) Gaertn.	PLP2757	Herb	-	Sangla
<i>Fallopia convolvulus</i> (L.) Á Löve (Syn. <i>Polygonum convolvulus</i> L.)	PLP2689	Climber	-	F
<i>Fallopia dumetorum</i> (L.) Holub (Syn. <i>Polygonum dumetorum</i> L.)	PLP9619	Herb	-	F
<i>Oxyria digyna</i> (L.) Hill	PLP3221	Herb	-	F, GA, S
<i>Persicaria amplexicaulis</i> (D. Don) Ronse Decr. (Syn. <i>Polygonum amplexicaule</i> D. Don)	PLP2549	Herb	-	F
<i>Persicaria capitata</i> (Buch.-Ham. ex D. Don) H. Gross (Syn. <i>Polygonum capitatum</i> Buch.-Ham.ex D. Don)	PLP6239	Herb	-	F
<i>Persicaria hydropiper</i> (L.) Delarbre (Syn. <i>Polygonum hydropiper</i> L.)	PLP3638	Herb	-	F
<i>Persicaria nepalensis</i> (Meisn.) Miyabe(Syn. <i>Polygonum nepalense</i> Meisn.)	PLP7964	Herb	-	F
<i>Persicaria vivipara</i> (L.) Ronse Decr. (Syn. <i>Polygonum viviparum</i> L.)	PLP2971	Herb	-	F, GA, S
<i>Persicaria wallichii</i> Greuter and Burdet (Syn. <i>Polygonum polystachyum</i> Wall. ex Meisn.)	PLP3138	Shrub	-	F, GA
<i>Polygonum affine</i> D. Don	PLP3142	Herb	-	GA
<i>Polygonum aviculare</i> L.	PLP3589	Herb	-	F, G, GA, S
<i>Polygonum cognatum</i> Meisn.	PLP9790	Herb	-	S
<i>Polygonum glaciale</i> var. <i>glaciale</i> (Syn. <i>P. glaciale</i> (Meissn.) Hook. f.)	PLP3602	Herb	-	Katgaon
<i>Polygonum molliforme</i> Boiss.	PLP6312	Herb	-	S
<i>Polygonum paronychioides</i> C.A. Mey.	PLP2881	Herb	Endemic	F, G, S
<i>Polygonum plebeium</i> R. Br.	PLP3557	Herb	-	S
<i>Polygonum pubescens</i> Blume (Syn. <i>Persicaria pubescens</i> (Blume) Hara)	PLP7641	Herb	-	F
<i>Polygonum somdevae</i> Aswal and Mehrotra	PLP3388	Shrub	-	GA
<i>Polygonum tortuosum</i> D. Don	PLP3315	Herb	-	GA, S
<i>Polygonum rottboellioides</i> Jaub. and Spach(Syn. <i>P. tubulosum</i> Boiss.)	PLP3018	Herb	-	F, GA
<i>Rheum australe</i> D. Don	PLP2673	Herb	Vulnerable	F, GA
<i>Rheum webbianum</i> Royle.	PLP6280	Herb	Endemic	GA
<i>Rumex acetosa</i> L.	PLP9472	Herb	-	Chansu
<i>Rumex hastatus</i> D. Don	PLP2541	Herb	-	G
<i>Rumex nepalensis</i> Spreng.	PLP2895	Herb	-	F, G, GA, S
<i>Rumex patientia</i> subsp. <i>orientalis</i> (Bernh. ex Schult. and Schult. f.) Danser(Syn. <i>R. orientalis</i> Benth. ex Schult. and Schult. f.)	PLP6338	Herb	-	GA
Portulacaceae				
<i>Portulaca oleracea</i> L.	PLP3118	Herb	-	F
Primulaceae				
<i>Androsace globifera</i> Duby	PLP3294	Herb	-	GA
<i>Androsace lanuginosa</i> Wall.	PLP3136	Herb	-	F, GA
<i>Androsace rotundifolia</i> Hardw.	PLP7661	Herb	-	F
<i>Androsace sarmentosa</i> Wall.	PLP4106	Herb	-	Rupi, Kharogla
<i>Myrsine africana</i> L.	PLP2921	Shrub	-	Bhabhanagar
<i>Primula denticulata</i> Sm.	PLP2806	Herb	-	GA
<i>Primula floribunda</i> Wall.	PLP2569	Herb	Endemic	G
<i>Primula macrophylla</i> D. Don	PLP9847	Herb	-	GA
<i>Primula sessilis</i> Royle ex Craib	PLP3034	Herb	Endemic	Sangla
Ranunculaceae				
<i>Aconitum heterophyllum</i> Wall. ex Royle	PLP3215	Herb	Endemic and Endangered	GA
<i>Aconitum rotundifolium</i> Kar and Kir	PLP11260	Herb	-	GA
<i>Aconitum violaceum</i> Jacquem ex Stapf	PLP3288	Herb	Endemic and Vulnerable	GA
<i>Adonis aestivalis</i> L.	PLP2719	Herb	-	F, S
<i>Anemone obtusifolia</i> D. Don	PLP7656	Herb	-	F

ACKNOWLEDGMENTS: We are thankful to Dr. P.S. Ahuja, Director, IHBT for providing facilities and to Department of Biotechnology, Government of India for funding our research. We are grateful to Mr. P.C. Pant, ex staff, Botanical Survey of India (BSI), Dehradun for helping in authentication of herbarium samples. We are also thankful to the project and field staff for support. We express our heartiest gratitude to Late Dr. H.R. Negi for initiating this work and for his constant encouragement. This is IHBT Publication No. 3166.
